GIS ANALYTICS ASSESSMENT

A website that sells: a concept for a young fashion label

GIS Analytics helps brands grow with AI: websites that convert, AI features that help people buy, and visibility in AI assistants such as ChatGPT. This assessment mirrors that work for a fictional client, Velmora, a London evening-wear label one year old, with 48 pieces made to order, 760 Instagram followers, no reviews yet, and Black Friday six weeks away. It should take 3 to 4 hours.

> **Use of AI tools.** You are expected to use AI tools such as Claude, ChatGPT, Cursor or Copilot, as we do in our own work. We assess your judgement: what you asked for, what you checked, and what you changed.

MATERIALS

- `brand.md`: the client's facts, audience, voice, palette and typefaces.
- `products.json`: 48 products with prices, fabrics, sizes, occasions and lead times.
- `analytics.csv`: six months of shop analytics by channel and device: sessions, add to carts, checkouts, orders, revenue and ad spend.

REQUIREMENTS

1. Build a home page and one product page in Velmora's style, published on a free host (Vercel, Netlify, GitHub Pages or Cloudflare Pages). It must work well on a mobile phone.
2. Add one AI feature that helps someone buy, for example a stylist that suggests pieces for an occasion, or a fit and delivery-date helper. It must say when it does not know, and never invent a product, price or date. No API keys in the code or on the page.
3. Write a one-page plan: the three changes that would most increase sales before Black Friday, based on the analytics, and how you would measure each.
4. Present your work in a 10-minute call: the site, your choices, what you would cut, and how it makes the client money.

OPTIONAL EXTENSIONS

- How the site helps AI assistants recommend Velmora (structured data, occasion pages).
- A Black Friday version of the home page.
- Performance and accessibility scores for both pages.

ASSESSMENT CRITERIA

- Craft: it looks and reads like a real brand, on a phone.
- Commercial sense: choices tied to sales and to the numbers.
- An AI feature that is useful and never makes things up.
- A clear presentation that holds up to questions.

SUBMISSION

Send the site link, the repository link and your one-page plan within one week. Spend no more than 4 hours, and submit what you have at that point. We then arrange a 30-minute call, starting with your 10-minute presentation. Use free stock images with credit or placeholders, never a real brand's assets.

Velmora is fictional. No real people, brands or companies are represented.
